PROFESSIONAL SUMMARY

Data Scientist and Predictive Modeler with a Master of Science in Computer Science and nearly two years of professional experience applying advanced data analysis, mining, and regression techniques to maximize business yield. Expert in audience segmentation, clustering, profiling, and developing automated internal reporting systems and dashboards. Proficient in transforming complex structured and unstructured datasets into clear, actionable marketing and digital media insights, facilitating data storytelling to both technical and client-facing non-technical stakeholders.

TECHNICAL SKILLS

- **Core Programming & Data Tools:** Python, R, SQL, SAS, FastAPI, Advanced Microsoft Excel
- **Data Science & Predictive Modeling:** Regression Analysis, Yield Optimization, Audience Segmentation, Clustering, Profiling, Data Mining, Machine Learning, Deep Learning (TensorFlow, PyTorch)
- **Data Orchestration & Infrastructure:** Apache Kafka, Spark Streaming, Apache Airflow, Docker, Kubernetes, AWS (S3, EC2), MLOps (MLflow), CI/CD pipelines
- **Reporting & Communication:** Automated Reporting Dashboards, Data Storytelling, Cross-functional Collaboration, Site-side Tracking & Implementation

PROFESSIONAL EXPERIENCE

Sriviss Group LLC | Machine Learning & Data Scientist Intern | Dec 2025 - May 2026

- Collaborated with cross-functional Retail Technology, Media, and Account Services teams to architect and integrate predictive modeling solutions into production systems, enhancing digital media targeting accuracy.
- Supported the continuous optimization of automated pipelines and predictive models, utilizing complex data analysis, data synthesis, and MLflow tracking to measure model reliability, accuracy, and performance efficiency.
- Developed internal automated reporting tools, scripts, and documentation to monitor site-side tracking and resolve tagging issues in coordination with traffic and production teams.
- Delivered client-facing, non-technical recommendations and data storytelling presentations to convert complex system metrics into understandable and actionable optimizations for business partners.

Gingr Informatics Pvt Ltd | Associate Data Scientist / Machine Learning Engineer | Jan 2023 - Jun 2024

- Managed large-scale structured and unstructured datasets, implementing data mining and data management best practices to ensure strict compliance, high data accuracy, and integrity for downstream predictive modeling assets.
- Designed and engineered relational and dimensional data layers using Python, SQL, and advanced Excel to clean, process, and optimize data streams for audience segmentation, clustering, and regression analysis.
- Performed systematic data analysis on live campaigns to evaluate tuning parameters, identify system performance opportunities, and execute rapid scaling adjustments that maximized yield.
- Built and maintained automated scoring systems and post-campaign dashboards to track key media performance metrics (CPM, CPC, CPE, CPA models) and identify geographic strengths and weaknesses.

TECHNICAL DATA SCIENCE PROJECTS

Real-Time Sales & Marketing Analytics Platform

- Architected an end-to-end streaming data pipeline using Apache Kafka and Spark Streaming to capture real-time ad placement metrics and performance across thousands of geographic locations.
- Applied regression modeling techniques to maximize ad spend yield while measuring the diminishing returns of marketing efforts at scale.
- Developed internal automated reporting systems and real-time dashboards to identify digital placement-level strengths and weaknesses across simultaneous campaigns, utilizing Python and SQL.

Local Decoupled RAG Document & Insight Analyzer

- Applied text data mining and structured prompt engineering optimization for local LLMs (Llama 3) to extract semantic insights and elevate automated customer profiling and interactions.
- Engineered an ingestion pipeline utilizing semantic data models to feed unstructured multi-format data into a persistent ChromaDB vector database, streamlining automated data migration.

Advanced Deep Learning Image Classifier

- Developed and fine-tuned deep learning classifiers using TensorFlow, performing advanced profiling and model analysis to enhance classification and clustering accuracy.
- Deployed the optimized model as a lightweight microservice using FastAPI and Docker for real-time inference and seamless pipeline integration.

EDUCATION

Master of Engineering in Computer Science | University of Cincinnati | Cincinnati, OH | August 2024 - May 2026
Bachelor of Technology in Computer Science (AI & ML Specialization) | Malla Reddy University | Hyderabad, India | August 2020 - May 2024
